# Strengths

- AI Style Assistant

Enhances the user experience by providing personalized product recommendations.

- Jean Finder

Helps customers find the most suitable jeans and size, reducing decision-making time and improving the shopping experience.

- Strong Category Structure & Search

The navigation bar, mega menu, and search function allow users to quickly find the products they are looking for.

- Customer Reviews

Customer reviews increase trust and help users make informed purchasing decisions.

- Outfit Recommendations

Contributes to product marketing by recommending complementary products to the user.

# Areas of Improvement

- Limited Mini Cart Functionality

The mini cart opens, but the user cannot remove items or update quantities without visiting the main cart page. This creates unnecessary steps and reduces shopping convenience.

- Limited Product Image Navigation

Product images are displayed vertically. Adding navigation arrows would allow users to browse product images more easily and improve the overall user experience.

- No Product Comparison Feature

The website does not provide a product comparison feature. Adding this functionality would help users compare similar products more easily and make informed purchasing decisions.

- Too Many Promotional Campaigns

Displaying too many promotional campaigns on the homepage may distract users, making it difficult to identify the most beneficial offer. This may slow down the decision-making process and negatively affect the user experience.

# Business Requirements

| Requirement ID | Business Requirement                                           |
|----------------|----------------------------------------------------------------|
| BR-01          | Improve the overall online shopping experience.                |
| BR-02          | Help users make faster and more informed purchasing decisions. |
| BR-03          | Improve product exploration and comparison.                    |
| BR-04          | Increase customer satisfaction and shopping efficiency.        |
| BR-05          | Improve usability from a UX perspective.                       |

# Functional and Non-Functional Requirements

| Areas for Improvement            | Functional Requirement                                                                                      |
|----------------------------------|-------------------------------------------------------------------------------------------------------------|
| Limited Mini Cart Functionality  | The system shall allow users to remove items and update quantities directly from the mini cart.             |
| Limited Product Image Navigation | The system shall provide navigation arrows to allow for a more comprehensive examination of product images. |
| No Product Comparison Feature    | The system shall allow users to compare similar products.                                                   |
| Too Many Promotional Campaigns   | The system shall display promotional campaigns in a clear and organized manner.                             |

| Requirement ID | Non-Functional Requirement                                                                         |
|----------------|----------------------------------------------------------------------------------------------------|
| NFR-01         | The website shall load within 3 seconds.                                                           |
| NFR-02         | The website shall be responsive on desktop, tablet, and mobile devices.                            |
| NFR-03         | The website shall provide a user-friendly interface.                                               |
| NFR-04         | The website shall ensure secure payment processing.                                                |
| NFR-05         | The website shall be available 24/7 with minimal downtime.                                         |
| NFR-06         | The website shall be compatible with all major web browsers (Chrome, Edge, Firefox, Safari, etc.). |
| NFR-07         | The AI Style Assistant shall be reliable and available 24/7.                                       |

# Prototype

Navigation arrows allow users to switch between product images more quickly, improving usability and the overall shopping experience.

# UAT(User Acceptance Test)

- T-01

Goal: Verify the mini cart functionality.

Precondition: The user has added a product to the cart.

Steps:

- The user selects a size and clicks the "Add to Cart" button.
- The selected product is added to the cart.
- The mini cart is displayed when the user hovers over the cart icon.
- The user removes a product or updates its quantity directly from the mini cart.

Expected Result:

- The user can remove items directly from the mini cart.
- The user can update product quantities.
- The cart total is updated automatically.
- The changes are reflected immediately without opening the main cart page.

# UAT(User Acceptance Test)

- T-02

Goal: Verify product image navigation.

Precondition: The user chooses a product on the product listing page and clicks the product image.

Steps:

- The user clicks the product image on the product listing page.
- The user views the product details.
- The user clicks the "Next" icon to view the next product image.

Expected Result:

- The product image changes immediately when the navigation arrow is clicked.
- The user can easily view all images of the selected product by using the navigation arrows.

# UAT(User Acceptance Test)

- T-03

Goal: Verify the product comparison feature.

Precondition: The user is on the product detail page.

Steps:

- The user clicks the "Compare" button.
- The selected product is added to the comparison list.

Expected Result:

- The selected products are displayed on the comparison page.
- The product information is displayed side by side for comparison.

# UAT(User Acceptance Test)

- T-04

Goal: Verify the promotional campaign layout.

Precondition: The user is on the homepage.

Steps:

- The user opens the homepage.
- The user views the promotional campaign banners.
- The user identifies a promotional campaign.

Expected Result:

- The promotional campaigns are displayed in a clear and organized layout.
- The user can easily identify the most relevant promotional offer.
- The homepage remains easy to navigate despite multiple campaigns.

# Conclusion

The Mavi website was analyzed from both customer and business analyst perspectives.

The website's strengths and areas for improvement were identified through practical examples.

Business requirements, functional requirements and non-functional requirements were defined based on the analysis.

A prototype and UAT scenarios were created to support the proposed improvements.

The proposed solutions aim to enhance the overall shopping experience and usability.
